

# GLYCOL BEER COOLING SYSTEMS

Introducing a brand-new range of energy saving cooling solutions for your bar

- The most energy efficient beer cooling system on the market
- Up to 50% lower running costs than a standard system with under counter coolers
- Caters for stout, ale, craft beer and ice cold / sub zero products
- Can incorporate keg room and bottle cabinet cooling in one compact system
- Replaces heat generating undercounter coolers with highly efficient slim-line chiller plates
- Tailored to your exact requirements

AVAILABLE SYSTEMS:

## HYBRID GLYCOL / ICE BANK

Offers 100% backup with ice reserve to accommodate peak demand. Ideal for high volume outlets and for those who require energy efficiency with ultimate reliability.

## FULL GLYCOL

Energy efficient glycol cooling system with compact design. Suitable for venues with limited space and where the added security of an ice reserve is not desired.
